© Mutual interference prevention When installing over 2 sensors closely, set the each frequency by the switch for frequency setting to prevent malfunction from mutual interference.

#### Optical axis misalignment alarm (low light intensity alarm)

Emitted light level can be reduced due to warped product or long-term usage. When nothing is detected during operation, this function checks received light level and outputs alarm at 'OFF level+approx. 3%' of received light level. Emitted light level is returned to the normal level with teaching.

#### ○ Emitter damage alarm

uts alarm when ei g impact to the pr itter is damaged due to the long-term usage of emitter elements or

#### Self-diagnosis function

Mapping sensor is able to self-diagnose periodically in normal operation. If error occurs, status indicator displays in which part error occurs.

(Refer to '
Operation Indicator'.)
Malfunction of synchronous line, it displays error and outputs signal.

\*\*The above specifications are subject to change and some models may be discontinued without notice.

Be sure to follow cautions written in the instruction manual and the technical descriptions (catalog, homepage).

\*The waveforms of 'Operation indicator' and 'EtherCAT output' are for Dark ON. The waveforms are reversed for Light ON.

1000 B

 Mount Master and Slave to face each other. <sup>(2)</sup> Place a glass plate at the guide line and adjust sensor height

③ Touch 🐵 key of Slave once without a glass plate and it enters installation guide mode. (Shorting SET (gray) and GND (blue) has same function.)

④ Adjust Master and Slave up/down/right/left, and check the place where output/stability indicators flash (displaying coincidence of optical axis of all CHs) and status indicator lights ON. Fix them at this place by tightening screws (tightening torque: 0.39 to 0.49 N·m). ⑤ Pressing @ key for over 3 sec completes teaching and operates the device in RUN mode.

\*If optical axis are not coincident, yellow LED of the status indicator flashes at 0.5 sec interval, and output indicator (red, slave) and stable indicator (green, master) flash at 0.5 sec interval. Please re-adjust the position of Master and Slave and execute teaching again. \*Avoid using the unit in the place where the sensor is exposed directly to the fluorescent light with high speed start or high frequency.

# Mode Switching Method

\*1: Entering to the installation guide mode and pressing (a) key for 3 seconds starts teaching, and the product returns to the run mode after teaching completed.

\*2: When the status display is *a*, select channel to change using **(M**, **(W**) key and press **(m**) key When number of channel is flashing, set sensing level using **(M**) **(W**) key.

\*N stands for all channe

### Troubleshooting

Malfunction	Cause	Troubleshooting
Not operate	Power	Supply the rated power.
	Cable cut, disconnection	Check the wiring.
Not operate in sometimes	Sensor cover pollution by dirt	Remove dirt by soft brush or cloth and set sensitivity again.
	Connector connection failure	Check the connection area of connector.
Output is ON without a target	Initial sensitivity setting goes wrong	Remove the cause and set sensitivity again.
	There is a strong electric wave or noise generator.	Put away motor, electric generator, or high voltage line.

# Cautions during Use

 Follow instructions in 'Cautions during Use'. Otherwise, it may cause unexpected accidents.
 24VDC power supply should be insulated and limited voltage/current or Class 2, SELV power supply device.

power supply device. 3. Use the product, 1 sec after supplying power. When using separate power supply for the sensor and load, supply power to sensor first. 4. When using switching mode power supply to supply the power, ground F.G. terminal and connect a condenser between 0V and F.G. terminal to remove noise. 5. When connecting a DC relay or other inductive load, remove surge by using diodes or

varistors

6. Wire as short as possible and keep away from high voltage lines or power lines, to prevent surge and inductive noise.

7. This unit may be used in the following environments. Olndoors (in the environment condition rated in 'Specifications') QAltitude max. 2,000m

③Pollution degree 2
 ④Installation category II
