## SPB Series

## DIN rail mounting switching mode power supply <br> - Features

- DIN rail type and fixing screw type mountings

- Built-in overcurrent protection, output short circuit protection, overheat and over voltage limit protection circuit(SPB-120/240)
- Built-in power factor correction circuit(SPB-120/240)
- Low-voltage LED indicator
- Slim-type size(SPB-015: W22.5×H90×L90mm)
- Minimizes noise and ripple
- Improves user safety with terminal cover
- Designed to minimize heat
- Output power: 15W, 30W, 60W, 120W, 240W
- Output voltage: 5VDC, 12VDC, 24VDC, 48VDC

$※ 5$ : The weight includes packaging. The weight in parentheses is for unit only
※Environment is rated at no freezing or condensation.

## $\square$ Output Derating Curve By Ambient Temperature

Load<br>

## $\square$ Over-Heating Protection

If the inner temperature of the switching element is around $140^{\circ} \mathrm{C}$ by overheat, it stops switching operation and becomes open state. Output voltage is not output.

- To remove the power supply on the rail

First put a screw driver into the part © and push it downward.

## SPB Series

## Unit Description

- SPB-015/030 Series
- SPB-060/120/240 Series

1. Output power [+V] terminal
2. Output power $[-\mathrm{V}]$ terminal
3. Output(DC ON) indicator(green)
4. Output low voltage(DC LOW) indicator(red)
5. Output voltage adjuster(V.ADJ)
6. Input power [L] terminal
7. Input power [ N ] terminal
8. Frame ground [F.G.] terminal

※SPB-015, SPB-060 Series has an output power(+V) terminal(1) and an output power(-V) terminal(2).
Dimensions

- SPB-015 Series

## - SPB-060 Series

- SPB-030 Series
(unit: mm)

- SPB-120 Series

- SPB-240 Series

## DIN rail Mounting Type Switching Mode Power Supply

## Cautions During Use

- Caution for operating
- This product does not have the function for parallel or series operation.
- The output current must be used within the rated specification. If over current is applied to the product, over current protection is operating. It causes shorten the life cycle of the product.
- The output voltage must be used within the rated output specification.
- For the product, which has the control function for over-voltage, if making the output voltage adjuster(V.ADJ) to over rated voltage, the function starts to work.
- This product has the function of over-heating protection.

The over-heating protection operates when the product has over-heating condition.
The product normally operates if the load is removed for over 5 minutes.

- In case of the SPB-060, it does not have the harmonics suppression and power factor improvement circuit.

To improve harmonics suppression and power factor, install the additional device.

- In case of the SPB-060, it uses condenser rectification, and power factor is within 0.4 to 0.6 range. To use a cabinet panel or a electric transformer, select input power capacity of this product as below formula.

$$
\text { Input apparent power[VA] }=\frac{\text { Output active power[W] }}{\text { Power factor } \times \text { Efficiency }}
$$

- This product is provided with a noise filter, but noise is variable according to operating conditions such as installation environment and wiring.
-When the inner fuse is damaged, replace the fuse of same specification.
- Caution for mounting
- Mount this product on the surface of metal panel vertically for the reliability.
- Please mount this product at a well-ventilated place in order to increase the heat radiation efficiency.
- Effective mounting

When installing more than two power supplies, $\min .20 \mathrm{~mm}$ distance is required to radiate heat effectively. Assure min .75 mm distance of the upper or the lower product and mount the products as following figure.

- Dielectric or insulation resistance test when this unit is installed in the control panel.
- Separate the unit completely from a control panel circuit.
- Short all terminals of the unit.
- Caution for connecting the input power terminal

Connect input line(AC) to the input terminal correctly.
When you connect this to the other terminal, it may cause damage to the power supply.

- Do not use this unit at below places.
- Place where there are severe vibration or impact.
- Place where strong alkalis or acids are used.
- Place where there is direct ray of the sun.
- Place where strong magnetic field or electric noise are generated.
- Installation environment
- It shall be used indoor
- Altitude max. 2000m
- Pollution Degree 2
- Installation Category II

[^0]:    ※1: It is for $100 \%$ load.
    ※2: Adjusting voltage by the output adjuster(V.ADJ), it is changed the below voltage adjustment range.
    ※3: It is for the rated input voltage 100-240VAC(85-264VAC), and $100 \%$ load.
    $※ 4$ : It is for the rated input voltage $100-240$ VAC.
